TCR Software contracts with RoadSafe Traffic Systems, Inc.

Phoenix, AZ

Locally owned Traffic Control Rental Software, LLC (TCR Software) is proud to announce that it has completed negotiations with RoadSafe Traffic Systems, Inc. to provide them with the leading traffic control rental software in the industry – TCR Online. The software will allow RoadSafe to easily dispatch their drivers and equipment to various job sites as well as provide the necessary information to properly and efficiently invoice their customers for both equipment rentals and labor charges.

 "We now have a web-based version of the software that uses Microsoft's powerful SQL database engine that will be able to handle a company of RoadSafe's size and magnitude. We are all very pleased that we were able to provide them with the solution they were looking for.", said Barbara Hyde, Vice President of Sales and Marketing, TCR Software.

About TCR Software

Since 1995, TCR Software has been providing traffic control companies a way to keep track of their equipment. In 2009, TCR Software implemented their current web-based version of the software allowing their customers to access TCR anywhere they have internet access. Without the normal hardware or IT expenses and the growing interest in 'Cloud' software, customers soon saw the benefit of TCR Online and implemented it into their everyday business.

TCR Software currently has customers throughout the United States and Canada and continually strives to improve the application. They listen to their customer's needs and this year will implement a driver portal so drivers will be able to view and edit delivery tickets from their smartphone or tablet, and therefore, do away with paper tickets.

TCR Software always has been, and always will be, the innovative solution for the traffic control equipment industry.

About RoadSafe Traffic Systems, Inc.

RoadSafe Traffic Systems, Inc. (www.roadsafetraffic.com) is the nation's largest provider of traffic safety and pavement marking services. They are dedicated to providing safer work zones and offer a variety of services including temporary traffic control and protection, pavement marking, daily rentals, sign installation, as well as traffic device product sales. Headquartered in Chicago and operating in 37 states, RoadSafe has five district offices and over 30 branch offices.

David Meirick, President, RoadSafe Traffic Systems, Inc., said, "We are very excited moving forward with TCR Software. Sandy and Barbara have a product that will improve our dispatching and invoicing on the rental side of our business. They have been great to work with and we look forward to a continued strong relationship in the future."
